Abstract (en)
[origin: EP0886102A2] The spotlight has a housing (2) with a horizontal light output opening (3). It contains a light source (4) and a wavelength selective filter device. There is a filter (9) determining the colour components of the emitted light and a mirror reflector (5) with two different reflector sections (6,7), directing light onto different parts of the illuminated object. The filter is contained within the housing lying on an inclined filter plane (F). The plane of the filter is angled relative to the plane (E) of the light output opening at between thirty and sixty degrees.
