Abstract (en)

[origin: WO9733799A1] The invention relates to a protective cap (1) with a cap base (2), a cap wall (4) and a tamper-indicating strip (8) fastened to the lower edge of the cap wall (4). The tamper-indicating strip (8) is connected to the cap wall (4) by break-off cross-members (14) and an attachment point (13). To increase flexibility of the tamper-indicating strip (8), a plurality of joints (9) extending substantially parallel to the screw axis of the protective cap (1) are arranged in the direction of the periphery of the tamper-indicating strip (8).
