Abstract (en)
[origin: WO9729023A1] A self-closing closure assembly (13) for a container (11) of particulate material, e.g. talcum powder, and comprising a closure body (14) having a part spherical external surface (30) in which at least one aperture (33) is provided for dispensing powder from the container, a cover (15) mounted on the closure body (14) and having a part spherical inner surface (42) that is slidable over the external surface (30) between an aperture-closed position, and an aperture-open position, and biasing means (16) formed integrally with one of the cover (15) and body (14) to urge the cover towards the closed position. The cover (15) may be provided with a tamper-evident stop (52).
