Abstract (en)

[origin: WO9733825A1] A yarn spool bearing for textile production facilities is fitted as a material buffer between a continuous manufacturing process and further processing facilities downstream with stoppage times. To ensure gentle handling of the yarn spools (1, 2), the claimed yarn spool bearing is designed as a shelf bearing with shelves (6) which can move inside the bearing and on which the yarn spools (1, 2) can be supported in such a way as to prevent contact between a shelf floor (7) and its winding surface (8, 9) facing the floor (7).
