Abstract (en)
[origin: WO9828217A1] A winding machine is disclosed for winding several threads (3) on a corresponding number of empty bobbins (4). A thread guide (1) is associated to each empty bobbin (4) to press the thread (3) into a feeding position. The threads (3) are distributed from a winding position to the feeding position by a guiding device (20) which consists of a winding thread guide (13) moved on a guide (2) and of the fixed feeding thread-guides (1). The threads (3) are guided by the winding thread-guide (13) and successively distributed on the feeding thread guides (1) between the winding position and the feeding position.
