Abstract (en)

[origin: FR2746131A1] The present invention relates to articulated bases and methods and systems for implanting structures on said bases. An articulated base (1) for supporting structures (5) according to the invention comprises a body (12) bearing against any surface (4) on which the structure (5) is laid and a plate (11) receiving the latter; said body (12) and said plate (11) are interconnected by means of two bolts (18) and two screws (19) arranged respectively along two planes forming an angle comprised between 60 and 90 DEG on the one hand between each other and cutting each other along an axis ZZ', and on the other hand with respect to the bearing face (7) against the surface (4) of the body (12) where the bolts and screws are tightened, said plate (11) being held above and against the heads of the bolts (18) by screwing the heads of screws (19) bearing on top and against said plate.
