Abstract (en)
[origin: WO9734066A1] A sun and wind shield, particularly intended for balconies, terraces and the like, includes a flexible canvas material (8) or like material and cross-struts (7) connected to the material. The cross-struts are movable along posts (4, 5) for adjusting the area covered by the canvas material. The canvas material is divided into a plurality of canvas lengths (9) and each canvas length is delimited by a top and a bottom cross-strut (7). All cross-struts can be locked individually in desired positions relative to the posts (4, 5), such as to adapt the size and position of the shield along the posts.
