Abstract (en)

[origin: WO9722194A1] An object supervision system comprising at least one superior supervising means (28) and a device for supervising objects (30, 32, 34, 36, 38, 40, 42, 44) and/or flows of information. The device comprises at least two agent units (10, 12, 14, 16, 18, 20, 22, 24) that are interconnected in a network (26) and transmit messages to the superior supervising means, either upon request or on their own initiative, concerning objects connected thereto. At least one agent unit includes at least one supervising port for connection to an object. A group access port (46) is common to all agent units in the device and is connected to the superior supervising means for communication between the supervising means and the agent units.
