Abstract (en)

[origin: EP0887297A2] The winding tube (9) is held on two axle journals (10, 16) positioned on facing holder-arms (2, 3) at an adjustable distance apart. Each holder-arm has a support-shell (17, 18) movable from a holding position next to the centre of gravity into a transfer position. The support shells are spaced apart by an amount less than the distance between the axle journals, at least before the axle journals are inserted into the winding tube.
