Abstract (en)
[origin: EP0887485A2] The component is a unified plaster structural plate (1) and the run (13) of the longitudinal edges is inclined at 40-60 degrees to the plate central plane (8). The one filler phase (15), viewed in cross-section, is an inclinedly arranged blunt formation of an acute-angled projection (19) and the second filler phase (14), viewed in cross-section, is a weak bend of an obtuse-angled edge. The inclined long edge run (13) to the blunt filler phase (15) extends at least over one-third of the thickness (21) of the unified plaster structural plate (1). The inclined long edge run is in a straight line. On the view side (4), the rear side (5) and the edges (6,7) extends a covering (3), which is bent differently.
