Abstract (en)
[origin: EP0887492A1] The burial chamber is made of individual glass fibre plastic profiles (135x35x3mm), is easy to transport and is constructable on site. The base (11) is open to the earth, in connection with a filter (2) and the earth covering (6), provides a "breathing" and thereby improved ventilation of the burial chamber. A large surface multi-layer filter (2) (fleece, active carbon spheres in bearer material and chemically activated support layer) is positioned in a filter shaft adhered in a cover plate and is so constructively formed with a cover tunnel that the filter effect is not prejudiced by seepage water or penetrating soil.
