Abstract (en)
[origin: EP0887498A2] The lock has a coupling lever (28) which pivots on a bearing (27) attached to the housing. The coupling lever consists of a two armed coupling arm (29) and a control arm (29). A locking disc (22) which can be moved orthogonally to the direction of operation of the locking plate (13) consists of a projecting nib (41) in the area of operation of the key. The locking disc has a pin (24) which is in contact by the control curve (25) on the control arm and acts as a pivot for the coupling lever when the key or lock barrel is turned. The coupling lever remains in this position even with the locking bolt engaged.
