Abstract (en)

[origin: EP0887596A2] The side outlets (4.1,4.2) in the form of slits comprise an inner room (2) for containing and thermally influencing the room-air. The inner room contains a heat exchanger element (19), and a guide element (8) for the room-air and which has at least one passage (15) for the room-air into the inner room, in its base (14). The guide element contains a light (17). An additional outlet (18) is for primary air and consists of pipe with outlet nozzles. The guide element has a passage (7) for the room-air returned to the room. The passage has at least one further outlet (6) for primary air, in a feeder housing (3.1,3.2).
