Abstract (en)
An alarm clock comprising a driving assembly and a vibrating device (1) placed in a remote position, the driving assembly comprising a clock and a transmitter of a driving signal timed by the clock. The vibrating device (1) comprises a receiving element (3) responsive to the signal, vibrating elements (4) electrically connected to the receiving element (3) and operated by it in response to the signal, and electric feed means (10) electrically connected to the vibrating elements and to the receiving element (3). The vibrating device (1) is placeable in a portion of the bed which comes into contact with a person asleep on the bed itself to wake him up by means of its vibration. <IMAGE>
