Abstract (en)
[origin: DE19612907A1] The description relates to a control unit in which coils (2, 3, 4, 5) of the electromagnets of a hydraulic braking system are arranged in a frame (1). The control unit also has a printed circuit board (8) the extension of which is smaller than that of the frame (1). There are through-contact holes in the printed circuit board (8) which accept the ends (9) of the connecting wires (15, 16) for the coils (2, 3, 4, 5) and are in the form of insulation-displacements-rods. The plug contacts of the printed circuit board are arranged for the optimum component layout, while the connecting wires corresponding to this prerequisite are guided in the controller.
