Abstract (en)
[origin: WO9735955A1] The aim is to improve the ease of handling, storage life and ruggedness of a cleaning concentrate used for producing usable aqueous cleaning solutions in cleaning agent storage tanks of cleaning machines, in particular high-pressure cleaners, spray extraction systems and the like. To that end it is proposed that the cleaning concentrate should include a component which releases gas on contact with water and the cleaning concentrate should be packed in measured doses in water-soluble capsules.
