Abstract (en)

[origin: WO9801531A2] The invention concerns additives with an apparent density of 500 g/l for use in granular washing or cleaning agents with apparent densities of at least 500 g/l, said additives containing one or several anion surfactants and at least one other ingredient that is usually subsequently added when producing washing or cleaning agents, provided that this other ingredient or ingredients is an ingredient chosen from the following; bleach activator, bleach catalyst and premanufactured foam inhibitor. By adding these solid additives to solid base granules, the additives having approximately the same apparent density, granular form and size as the base granules, washing or cleaning agents with greater apparent densities are produced which have a uniform appearance and are not inclined to separate.
