Abstract (en)  
[origin: WO9735201A1] This invention discloses a test kit for multi-antigen serological diagnosis including a plurality of bead groups, each group including at least one bead, and a plurality of types of antigens, wherein each bead group has at least one common identifying physical characteristic, and wherein each type of antigen is bound to the at least one bead of one, respective, bead group. A method for assaying multiple types of antibodies in a serum sample is also disclosed.
