Abstract (en)

[origin: FR2746570A1] The terminal, arranged to be connected to a telephone network (9) and to receive calls from other machines connected to the network (9), comprises means (13) receiving the identity of each calling machine provided by the network (9), and means (14) for storing an electronic agenda containing the identities and the call processing modes of a plurality of machines, and comparator means (15) intended to search for each identity received in the agenda and to control means (5, 11) for processing the calls according to the associated processing mode. Application to fax machines with answering-recording device.
