Abstract (en)
[origin: EP0888731A2] The mount has a ring-shaped band (1), which is cylindrical in its contact section (3) with a through bore, while its lower edge section (4) facing the central axis (9) is conically reduced in size. The edge section has a cut-out (8). The band has outward facing locking noses (7). The gemstone is enclosed and held by the upper edge section (5) of the band. The mount is fitted into a passage bore, which extends from the outside into the interior of a hollow piece of jewellery. The bore diameter is between 10.0 mm and 4.0 mm. The wall section around the bore has a thickness of between 0.1 mm and 0.4 mm.
