Abstract (en)  
[origin: EP0888738A2] The drawer sides (2) have at their rear ends a horizontal stop which prevents horizontal displacement of the drawer sides relative to the extension rail (5). The hooks (10) of the drawer sides and the hooks (6) of the extension rail (5) when the drawer rests on the extension rail are spaced from the rails and drawer sides respectively so that when the drawer hangs in the extension rail it can be lifted so far from the extension rails that the cross bar part and horizontal stop come out of function. The horizontal stops at the rear end of the drawer sides (2) are formed by downwardly aligned projections (9) which with horizontal relative movement between drawer sides and extension rails abut the rear ends of the extension rails.
