Abstract (en)
[origin: EP0888945A1] The transport vehicle which runs on rails has a series of windows and a central longitudinal axis (L). It has two support posts (4) carried by the base structure (1) connecting the base to the roof (3). Each post defines an axis (A4,A5) located in a vertical plane perpendicular to the longitudinal axis. Side walls are carried by six successive posts. At least four posts of one wall are arranged so that their vertical planes are separate from the vertical planes of the second wall. At least one post vertical plane extends between two vertical planes of two successive posts of the second wall, separated from each other by a distance of at least 2.5 m.
