Abstract (en)
[origin: EP0889116A1] A high-density granular detergent composition including A) one or more surfactants; B) one or more crystalline alkali metal silicates having an SiO₂/Na₂O molar ratio of from 0.5 to 2.6; and C) one or more metal ion capturing agents other than Component B, having a calcium ion capturing ability of 200 CaCO₃ mg/g or more. Here, a total amount of Component A, Component B, and Component C is from 70 to 100% by weight of the entire granular detergent composition, and a weight ratio of Component B to Component A is B/A = 9/1 to 9/11, and a weight ratio of Component B to Component C is B/C = 4/1 to 1/15. The high-density granular detergent composition includes granules (I) containing the crystalline alkali metal silicate of Component B and granules (II) containing the metal ion capturing agents of Component C, the granules (I) and the granules (II) being present substantially in separate granules.
