Abstract (en)  
[origin: EP0889171A1] The upright T-arm (3) is thickened in its foot section. This thickened foot section evolves into the normal section of the arm in a roof-shaped formation (6). The upper side (9) of the wheel deflector is curved. The kerb stone on its under side has at least one cavity (7,8) running parallel to the wheel deflector longitudinal direction. It has a face surface (11,10) which is rectangular and running inclinedly to its longitudinal axis.
