Abstract (en)

[origin: EP0889213A2] The device has at least two sensors (7a,7b,7c,10) for detecting the air intake mass flow, the air intake temperature, the suction intake pressure and/or the throttle position, providing values used for calculation of the engine load, for regulation of the throttle position. The sensors are micro-integrated in a module (2), inserted in the air intake (4), together with the engine load calculation device (8) and/or the throttle position regulator for the throttle position regulation circuit.
