Abstract (en)

[origin: WO9728552A1] A control or signalling device such as a push-button or an indicator lamp including one or more electrical units attached to a base is disclosed. The electrical unit (30) and the base (20) include a rigid projection (40) and a hook (50), e.g. a U-shaped hook, and a retaining shoulder (23) and a recess (25) coacting therewith, respectively. The hook is preferably resiliently biased in a direction parallel to the mutual engagement surfaces (32, 27) of the unit and the base, and extends in the same direction as the projection.
