Abstract (en)

[origin: WO9736351A1] Electrical connector (10) having a housing (12) molded around body sections of a plurality of terminals (40, 42, 44, 46) disposed in first and second rows. The terminals have IDC termination sections (32, 34, 36, 38) for respective wires (22, 24) to be urged thereto by termination covers (26, 28). All IDC termination sections extend in a common direction from a common side of housing (12), and those (32, 34) of the first row are staggered rearwardly from those (36, 38) of the second row to facilitate wire insertion. The molding method includes providing core pins (92, 94) for supporting the terminals from one (74) of the mold halves, and lower terminals (40, 42) include lateral offsets (134) permitting core pins (94) to pass thereby to reach upper terminals (44, 46) vertically aligned therewith.
