Abstract (en)

[origin: US6180150B1] A packaging film is provided for foodstuffs, wherein the foodstuffs are preferably meat products. The a net is connected to one side of the film to increase resistance to tearing. The net is adhered to the film by a soluble edible adhesive. The film may be shaped into a container wherein the net lies predominantly on an outer side of the container. After filling the film with the foodstuff, the adhesive is dissolved, whereupon the net can be removed without destroying the film.
