Abstract (en)

[origin: EP0890542A2] The device has a tool for connecting the cooling circuit which is connected via a conducting system to a suction and oil separation system. A lifting arm (2) has a plate (3) linked to one end with at least one suction disc (4). The plate is rotatably attached to the lifting arm so as to pivot in the direction of the axis of the lifting arm. The plate is rotated by a motor. It can be turned through 360 deg., or through 45 deg. towards the arm and through 90 deg. away from the arm.
