Abstract (en)  
This spigot consists of a main body incorporating a shut-off valve, one rear mouth and one front mouth; the rear mouth may terminate in an end lid attached to the same, or present different outer zones fitted with means designed to provide a leak-proof connection between the spigot and the container and, optionally, a perforating device that allows a hole to be made in the lid or wall of the container for attachment of the spigot, or an accessory lid selected from among the several with different diameters that are supplied with the spigot, these lids incorporating a central hole to allow attachment to the rear mouth of the spigot and their subsequent immobilisation by the means for sealing the connection. <IMAGE>
