Abstract (en)

The use of modified fatty amines for reducing or preventing the deposition of low-mol. wt. by-products from polyester fibre production on textile materials made of polyester fibres or mixtures of these with other fibres is claimed. These amines have the formula R-NR3-(R1-O)n-R2 (I), in which R = 9-24C alkyl or acyl; R1 = 2-4C alkylene; R2 = H, or 1-4C alkyl or acyl; R3 = H or (R1-O)m; n, m = 2-100; the groups (R1-O) can be the same or different in (R1-O)n and in (R1-O)m. Also claimed is (i) a preparation containing (A) 3-50 wt% compound (1), (B) 2-10 wt% dodecylbenzenesulphonic acid, and optionally other components; (ii) a method for reducing or preventing the deposition of low- mol. wt. by-products as above on polyester-containing fibre material, by using a preparation as in (i).

Abstract (de)

Die vorliegende Erfindung betrifft die Verwendung eines modifizierten Fettamines der Formel R - NR3 - (R1 - O)n- R2 worin R C9-C24-Alkyl oder Acyl, R1 C2-C4-Alkylen, R2 Wasserstoff, C1-C4-Alkyl oder Acyl, R3 Wasserstoff oder (R1-O)m sind, n und m unabhängig voneinander eine ganze Zahl von 2 bis 100 bedeuten und (R1-O)n für n gleiche oder verschiedene Reste (R1-O) und (R1-O)m für m gleiche oder verschiedene Reste (R1-O) steht, zur Verringerung, bzw. Verhinderung von Ablagerungen von niedermolekularen Nebenprodukten entstehend während des Herstellungsprozesses eines Polyester-Fasermaterials, auf textilen Materialien, die aus Polyesterfasern bestehen oder diese Fasern im Gemisch mit anderen Fasern enthalten.
