Abstract (en)
[origin: EP0890682A1] The box-like prefabricated roof elements (4) each have in their corners, a vertical bore into which a bolt (3) of corresponding cross-section projects from the end side of the vertical stay (1). The corner of the roof element fits on the end side of the stay with one stay allocated to each corner area of one box like roof element. The outside wall elements of storey height which fit between the stays are likewise box-like and have on their narrow sides a circumferential stop collar (17). The collar fixes against the outside of the stay and against the narrow end sides of the roof elements. The number of bolts at the end sides of the stay corresponds to the number of corner areas of the roof elements.
