Abstract (en)

The locking device comprises a mount lower section on which a slidably guided and held mount upper section is held. The mount upper and lower sections are firmly held in the covered over position with the aid of a lock. The mount lower section is separated with a glass door wing's fixable section and by a further section of another glass door wing. The mount upper section in the locking position is bridged over in the door opening's edge. On the door's inner side of the mount lower sections (3,4), further mount lower sections (5,6) are associated to door's outer side. On the door edges (14), adapted connection sheets (12) means are connected in the door split (15), whilst screwed on fixture screws (13) are firmly clamped against the door wing (1,2).

Abstract (de)

Die Schließvorrichtung dient für Türen (1) mit einem Beschlagunterteil (4,5) und einem daraufverschiebbar geführten und gehaltenen Beschlagoberteil (3), wobei das Beschlagober- und das Beschlagunterteil (3 bzw. 4,5) in der überdeckenden Position mit Hilfe eines Schlosses (7) feststellbar sind. Das Beschlagunterteil ist in einem an der Tür (1) befestigbaren Abschnitt (4) und einen an den Türrahmen (2) anbringbaren weiteren Abschnitt (5) unterteilt. Das Beschlagoberteil (3) überbrückt in der Schließstellung die Türöffnungskante (6). <IMAGE>
