Abstract (en)
[origin: EP0890697A2] The safe deposit cubicle consists of an external housing with a closed chamber surrounded by armour plating and an armoured swivel door. A locking system is provided for the door, and an electronic circuit operable using a scanning panel (10) controls the operation of the locking system. The scanning panel in the closed normal condition of the cubicle, is arranged in a protected reception chamber, closed by a lockable metal screen (7). Only after unlocking and opening of the metal screens is it accessible to receive entered commands. The metal screen is matched to the design of the cubicle in such a manner, that in its locked position, it cannot be identified as such a screen, by unauthorised persons.
