Abstract (en)
[origin: US5978986A] PCT No. PCT/EP97/01645 Sec. 371 Date Sep. 25, 1998 Sec. 102(e) Date Sep. 25, 1998 PCT Filed Apr. 1, 1997 PCT Pub. No. WO97/37088 PCT Pub. Date Oct. 9, 1997A public sanitary cell includes a sanitary compartment accessible through an outer door in which a toilet bowl having a drain is disposed. In order to provide sufficient freedom of motion in front of and next to the toilet bowl, in particular for wheelchair users, while maintaining a compact construction, the toilet bowl can be pivoted by a drive device about a substantially vertical axis, wherein an actuating device is disposed outside of the sanitary cell to operate and control the drive device. The drive device is preferentially operable and controllable by the actuating device only when the outer door is closed and/or when the sanitary compartment is empty.
