Abstract (en)
[origin: EP0891846A2] The machine has truncated cone-shaped machining discs (2) with implements (15) positioned along at least one spiral on the outer surface. The implements have radially pointing blades (16) at right-angles to slitting edges. The discs contain passages next to the implements for removing the volume of wood machined from the round wood (4) to form the beams. The blades are between 7 and 12, preferably 10 centimetres longitudinal The difference in height of the blades of two implements behind each other is between 0.4 and 1, preferably 0.5 millimetres.
