Abstract (en)

[origin: EP0892139A2] The door (2) consists of an outer (12) and inner (11) part. The first blade (5) of each hinge is fixed to the outside of the column (1) across the longitudinal axis of the vehicle. The second blade (7) fits through an opening (8) in the narrow side of the door next to the column into the interior (13) and is then adjustably fixed by a point (19) accessible through the inner part. The second blade is fixed to the door by at least one screw connection in the form of a female thread (20) with screw bolt (18) with head (21) totally countersunk in a recess (22). The inner part has a contact surface (17) for the second blade, with a hole (19) for the screw bolt.
