Abstract (en)
[origin: EP0892143A1] The seal comprises an extrusion which is slid into a retaining groove (6) in one part of the window or door and closes the gap between the fixed frame and the moving frame. The seal strip has an outer sealing profile and is hollow. The bottom section of the seal has an additional sealing lip (17) which is effective if the upper part of the seal is torn off. The additional sealing lip has a triangular profile and is mounted on the lower part of the seal profile. The upper part of the seal is linked to the lower part via thin connecting profiles (20,21)
