Abstract (en)

The data is detected by sensors located in the vehicle and are communicated from the vehicle with a transmitter unit. Sensor signals occurring in vehicles ahead in the traffic are made available for warning on-coming traffic. The sensor signals are from e.g. crash sensors, sensor of a warning blinker when a car has a breakdown or brake sensor. The vehicle transmits its own and received sensor data together with position data to a central control which processes the sensor data and transmits traffic warnings to the connected vehicles. The sensors (1) are connected to inputs of an interface unit (2). A vehicle bus (3) is connected to the interface to communicate traffic relevant data. The interface is connected with a processing unit (4) which tests the sensor data for its relevance. Relevant sensor data are transferred via a transmitter/receiver unit (5) to the transmitter/receiver units (5,6) of following cars. The processing unit has a mobile radio module (7) connected to transfer its own sensor data and received sensor data via a service provider to a central control to process and provide warnings.

Abstract (de)

Zur Beschleunigung der Ermittlung von Verkehrsinformationen unter Verwendung von in einem Kraftfahrzeug mit Sensoren (1) erfaßten Daten, die von dem Kraftfahrzeug mit einer Sendeeinrichtung (5) kommuniziert werden, ist es zweckmäßig, wenn die Kraftfahrzeuge mit Empfangseinrichtungen (5) für die kommunizierten Daten ausgestattet werden und wenn typischerweise Gefahrensituationen zuzuordnende Sensordaten auf kurzem Weg von Fahrzeug zu Fahrzeug übertragen und im empfangenden Kraftfahrzeug zu einem Warnsignal verarbeitet werden.
