Abstract (en)
[origin: DE19730680C1] The pressbutton has a ring (1) into which a spring-loaded button (2) can be pressed to a predefined depth. The top of the button is flush with the upper edge of the ring. The ring is reduced continuously in height to at least the depth of the actuation depression on least one side parallel to the longitudinal axis of the operating finger. The ring can be reduced in height to the same extent on opposite sides.
