Abstract (en)

[origin: EP0893242A1] The procedure is for manufacturing cellulose fibre products such as paper handkerchiefs or serviettes, which may be rectangular or square in shape. Continuous strips (B1,B2) of paper are printed with two different and alternating designs (M1,M2). They are then cut into individual handkerchiefs or serviettes and are stacked prior to packing so that each stack contains articles with alternate designs. The paper used for the procedure is taken from a roll (10) and two rows of alternating designs are printed on it before the strip is divided lengthwise. Each section then passes through a folder (30) to fold the articles lengthwise, then a cutter (32) and finally another folded (34) to fold them transversely before stacking.
