Abstract (en)

[origin: EP0893366A2] The floor (12) of the transporter has load-accommodating side walls or side wall sections pivot-connected to it, especially along the longitudinal side edges (13). The side walls have openings or sections that open. A ramp type gate (24,27) is pivot-connected to at least one end side transverse edge (14) of the floor, and is multi-sectioned with each section pivoting relatively to each other around an axis running parallel to the transverse edge.
