Abstract (en)

[origin: EP0893380A1] Sensors (37,38,12) for detection of the difference in position of a sheet of paper (10) with respect to a predetermined position are configured to realign the sheet (10) relative to the electronic image, which is to be printed, using the various rollers (31-36) and positioning devices to achieve this. A central control unit and re-alignment circuit are used to control the roller driver motors.
