Abstract (en)
[origin: EP0893383A2] The conveyor assembly for printed matter has a conveyor belt (3) moving in a single direction (A). A chain (15) hangs over the belt which is linked and by bolts which also support overlapping rollers (17,18). The uppermost bolt is fixed to the free end of an articulated arm (31). The chain runs between side-guides near the lower end. The combined weight of the rollers and chain hold them against the printed paper (9) and conveyor belt.
