Abstract (en)
[origin: EP0893391A2] The arrangement provides a hand-held transmitter with a casing, in which at least one switch arrangement is provided. A snap element (7) is arranged in the interior of the transmitter casing (1), following coaxial a manually operated key (3). An elastic, proportional activating element (8), whose activation direction is arranged rectangularity to that of the snap element, is arranged on the key. Sensors (9) are arranged around the proportional activating element at walls of an extrusion (10), whereby at least two sensors are arranged opposite each other. A guide element is provided, in which the lower end of the key is led.
