Abstract (en)  
[origin: EP0893564A2] The hinge has an upper section (11) which is firmly attached to the door wing, and a lower section (12) which is firmly attached to the frame. The two sections are movable relative to each other about a hinge pin (13). A threaded bush (14) surrounds the pin and is supported on a twist-activating flange (15) of the lower section while engaging in the upper section. The upper section is provided with an inner thread (16) for allowing relative adjustment between the threaded bush and the upper section, in which the threaded bush engages with an outer thread (17) provided in the lower third of the bush. The upper section has inner threads (16) at both its ends of its engagement bore (18) for receiving the threaded bush.
