Abstract (en)

[origin: EP0893855A2] The cable connection contacts an electro-mechanic component (1) which executes movements, extensions, or compression in the area of a connection guide. Cables (4) of the cable connection are led tangential at one of the sides of the component in the area of the connection guide. The cables are respectively connected tangentially at a connecting point (3) with the component, extending crosswise to the direction (5) of the movement, extension, or compression. The cables of an essentially parallel led cable pair are preferably led tangentially at opposite sides of the component.
