Abstract (en)
[origin: FR2747108A1] An inflatable packaging including a valve (15) between two flexible sheets extending at least partially inside the walls and communicating the inside of the packaging with the outside thereof via an opening (9). One end (12a) of a tab cut out of one wall of the packaging is located in a window (22a) in a seal (22) joining said wall to the two flexible sheets forming the valve (15). The walls of the valve (15) may be torn and the packaging deflated by grasping said end (12a) of the tab and pulling it leftwards.
