Abstract (en)
[origin: WO9739212A1] A device and a method for repairing of posts, in particular lamp posts, in which the lamp post (1) is cut off in the area of the damaged portion, which is then removed from the two parts (2, 7) of the post. Subsequently, the post parts (2, 7) are jointed by means of a jointing device comprising a jointing pipe (8) exhibiting a longitudinal slit (9), which pipe is made of an elastically deformable and resilient material. When being inserted into the post parts (2, 7), the jointing pipe is squeezed together, and the squeezing ceases after the insertion into the post parts in order for the jointing pipe to spring back elastically. Subsequently, the post parts are pushed together essentially end to end so as to form a stable joint between the two parts of the post.
