Abstract (en)

[origin: WO9741339A1] The invention discloses a method for adjusting a position sensor (13) fitted on the control shaft (12) securely connected with the fuel pump (10) loading lever (14) of an internal combustion engine with compression ignition to equip a motor vehicle, the said sensor (13) sending to an electronic control system (7) a signal (V_p) corresponding to the amounts of injected fuel, characterised in that a coefficient of correction (a_0-a_1) is applied to the signal (V_p) emitted by the said sensor (13), the said coefficient of correction (a_0-a_1) being deduced from the signals (V_{pa} , V_{pa}') emitted for a similar preset position of the loading lever (14) by a pre-adjusted position sensor and the said position sensor (13) respectively.
